## PROFESSIONAL EXPERIENCE

|                                                                                     |                     |
|-------------------------------------------------------------------------------------|---------------------|
| <b>CSCSE</b>                                                                        | Jul 2025 - Present  |
| System engineer Information Network Department                                      | Beijing             |
| <b>CRCC</b>                                                                         | Mar 2024 - Jul 2025 |
| Web Front-End Developer Institute of Geographic Information and Digital Engineering | Beijing             |
| <b>Springer Capital</b>                                                             | Sep 2023 - Dec 2023 |
| Software Engineering Intern                                                         | Wilmette, Illinois  |

## EDUCATION

|                                                                                                                                                                                                                                                                             |                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>University of Kent, UK</b>                                                                                                                                                                                                                                               | Sep 2022 - Sep 2025       |
| Computer Science Master                                                                                                                                                                                                                                                     | Canterbury, Kent, England |
| Relevant Courses: Implementation of Artificial Intelligence Systems, Data Mining and Knowledge Discovery, Problem Solving with Data and Text, Software Engineering, Artificial Intelligence Programming, Cognitive Neural Networks, Natural Computing, Systems Architecture |                           |
| Honors/Awards: Graduated with Distinction                                                                                                                                                                                                                                   |                           |
| <b>Tianjin University of Science and Technology, Tianjin</b>                                                                                                                                                                                                                | Sep 2018 - Jun 2022       |
| Human Resource Management Bachelor                                                                                                                                                                                                                                          | Tianjin, China            |
| <b>University of Lodz, Poland</b>                                                                                                                                                                                                                                           | Dec 2019 - Jun 2020       |
| Human Resource Management                                                                                                                                                                                                                                                   | Lodz , Poland             |

## PROJECT EXPERIENCE

### Uigenius

Uigenius AI-powered UX/UI design tool that quickly generates prototypes for apps and websites from simple text descriptions. Now we have over 20,000 designers using our product worldwide, and more than 2,000 new users visit the site every day, growing rapidly.

Web url: <https://uigenius.top>

Windows desktop: <https://apps.microsoft.com/detail/9P7XBXGZN5JS>

### Longze Video Player

Longze Video Player is a powerful AI video player that supports MP4, WebM, and Ogg formats. Support transcribe text generation automatically, more than 10 languages transcribe translation, audio export, AI summary etc. Now we have more than 1k users per day, with an average usage time of over 40 minutes per day.

windows link: <https://apps.microsoft.com/detail/9NQ3W9QGGV2D>

### Open-Source npm Video Player Component longze-vue3-video-player (Developed Independently)

- Project Link: <https://www.npmjs.com/package/longze-vue3-video-player>
- Function Enhancement: Participated in the core feature development of the project, including support for shortcut operations, playback speed settings, mirror image settings, dark mode settings, picture-in-picture mode playback, full-screen/web full-screen playback, and playback from a specific time.  
Compatibility Improvement: Fixed the issue of global import failure and added video type judgment to prevent automatic HLS request termination from affecting the pause playback of MP4 and other video formats.

### Integrated Spatiotemporal Location Service Cloud Platform (Intranet Operation)

- Platform Architecture Design: Designed a scalable cloud platform architecture to support large-scale concurrent user operations and applications.
- High-Precision Positioning Service Development: Integrated Beidou-based high-precision positioning technology, including pseudorange differential, carrier phase differential, wide-area differential, and base station positioning, to provide real-time positioning services around the clock and over large areas.

- **Real-Time Data Processing:** Implemented a real-time data decoding and quality analysis system, decoding and pre-processing observational data and synchronizing data from various stations.  
Multi-Source Spatial Information Fusion: Developed a multi-source spatial information fusion service, integrating location information databases, fundamental geographic spatial databases, and thematic information databases to achieve rapid information fusion.
- **Application Service Interface Development:** Provided a rich set of application service interfaces for enterprises and individual developers to offer services such as indoor positioning systems, real-time terminal location information, thematic electronic maps, and industry-specific application systems.

#### **Integrated Smart Logistics Park Platform (Intranet Operation)**

- **Organizational Structure Module:** Designed and implemented an organizational structure management module, including functions for department management pages such as pagination, querying, adding, enabling, disabling, and conditional querying.
- **Employee Relationship Management Module:** Developed an employee basic information management page, implementing functions for querying, adding, more actions, deleting, conditional querying, and synchronization.
- **Attendance Management Module:** Implemented core functions for the attendance management page, including querying, adding, deleting, synchronizing, and conditional querying.  
Salary Management Module: Developed a payroll page with functions for querying, adding, deleting, importing, and sending pay slips.
- **Performance Management Module:** Designed and implemented a performance management module, including functions for querying, adding, deleting, synchronizing, and conditional querying.

#### **Digital Surveying and Mapping Management Platform (Intranet Operation)**

- **Task Management:** Utilized Work Breakdown Structure (WBS) to meticulously decompose projects, ensuring the rationality of project progress, outcomes, and personnel arrangements.
- **Project Personnel Management:** Reasonably assigned roles to project team members based on project needs and developed detailed personnel plans for approval by relevant leaders.
- **Progress Management:** Decomposed and planned project tasks, clarifying timelines and responsible persons for each task. Imported historical project data or referenced standard tasks to provide a basis for tracking. Monitored process completion and handled extension requests to ensure timely project completion.
- **Data Management:** Managed project production data comprehensively, including Beidou/GNSS positioning information, RTK, level instrument, and total station measurement data. Stored adjustment calculation results and data analysis reports to support project decision-making. Achieved unified data storage and query, supporting multiple archive formats such as documents, images, audio, and video.
- **Digital Display:** Leveraged digital earth technology to digitally display surveying-related data, enhancing data visualization and usability.

#### **MISCELLANEOUS**

---

- **Skills:** JavaScript, Vue, Java, MongoDB, MySQL, Redis, Keras, Axure, Maven, Spring, Python, Flask, Jenkins, Docker
- **Interests:** football, video games, badminton, table tennis, reading
